

without adding any address information, scanning the document to obtain at least one communication mark, if one is present, on the hardcopy;

decoding the communication mark to obtain at least a first communication address for a first communication mode and a second communication address for a second different type of communication mode directly or indirectly from said communication mark;

inputting said communication address into an address function of a communication device; and

initiating a communication of said information to said communication address through said communication device.

11. (Twice Amended) A method for providing automatic communication addressing comprising the steps of:

receiving a document from one from the group of a fax and an email communication and creating a hardcopy of the document;

without adding any address information, scanning the document to obtain at least one communication mark, if one is present, on the hardcopy;

decoding the communication mark to obtain at least one communication address indirectly from said communication mark;

inputting said communication address into an address function of a communication device; and

initiating a communication of said information to said communication address through said communication device;

wherein said communication mark is a storage address to a location where a communication address is stored.
